Path

Our Path suite of products delivers online courses and content anytime, anywhere.

SCORM / TIN CAN INFORMATION

Blue Sky eLearn uses SCORM Cloud as our SCORM engine. We chose this integrated platform as it allows us to support virtually every SCORM and AICC package in an easy-to-manage interface that our clients can manage directly.

SCORM Cloud is a service for hosting SCORM content. Our integration with SCORM Cloud allows it to work behind the scenes with our system to allow clients to leverage their SCORM or AICC content in our system natively.

Workflow Example:

- Client provides the SCORM content package that was created in Articulate Storyline, Captivate, Brainshark, or similar 3rd party tool.
- Client admin will see Course item type in Path called SCORM.
- Client admin uploads the file to Path, and Path automatically syncs the content with their SCORM.com account.
- The end user launches the content package, which is opened in a new tab.
- As the user finishes the SCORM content, Path pulls back pass/fail or complete/incomplete. Basic reporting is available in Path, and the Client admin can run more detailed reports on SCORM.com.
- The user can still take the pre-test, post-test, and evaluation built in Path. SCORM content packages can be mixed directly into Path's Course object to take advantage of features like prerequisites and access control outside of the SCORM content itself.

SCORM.com Fees

- Fees are passed through on SCORM.com.
- Fees are based on how many people take the course.
- Published pricing: http://scorm.com/scorm-solved/scorm-cloud-pricing/
- Client would be setup directly, choose their own SCORM.com tier, and get billed directly.

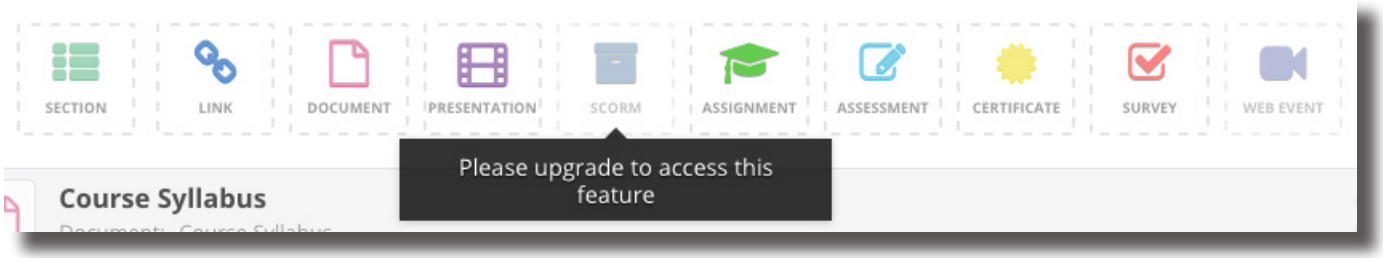
Path

Our Path suite of products delivers online courses and content anytime, anywhere.

Path LMS integrates directly with SCORM.com Cloud to support SCORM, AICC, and Tin Can.

Enabling SCORM



To enable SCORM as a course item, you'll need to copy 2 application credentials from SCORM cloud and have a Path LMS representative add them to your account.

Finding your application credentials

You're looking for the Application ID and Secret Key:

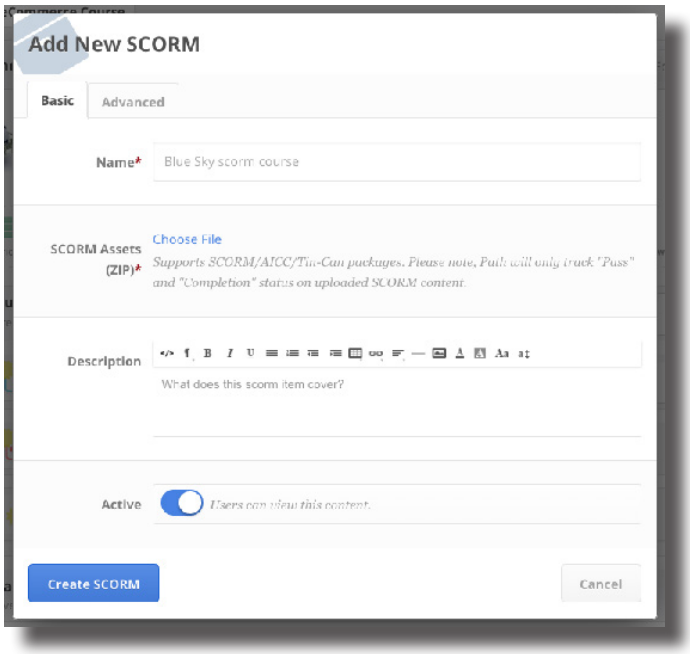
Adding a SCORM package to a Path LMS™ course

Path treats SCORM packages as course items. This means you can leverage Path's powerful course structuring tools, such as ecommerce, group access and pricing, prerequisites, credits, certificates, and more.

Once you have SCORM enabled, click the SCORM course item from any new or existing course.

In the modal, you'll want to add at least these basic settings:



Name

This will show up on the course item link, in addition to the name of your SCORM package, which is pulled in automatically once you reference one.

SCORM Assets (ZIP)

Upload your SCORM package here as a ZIP. Once the upload completes, click Create. Processing can take a couple of minutes longer for larger SCORM packages.

Interacting with SCORM content

For learners with access to the content launching is easy.

Visit the course item and click Launch Content

This will launch a new blank tab, as well as the SCORM content in a new window.

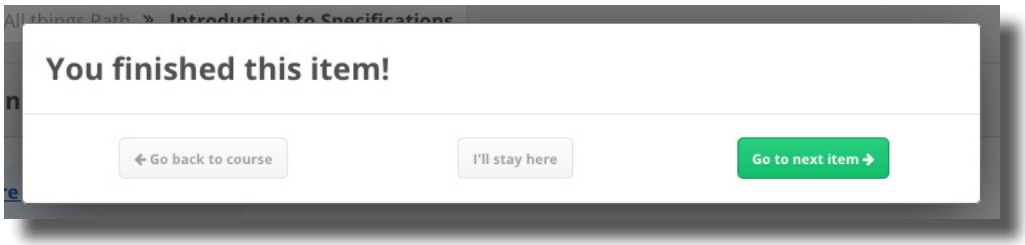
Path

Our Path suite of products delivers online courses and content anytime, anywhere.

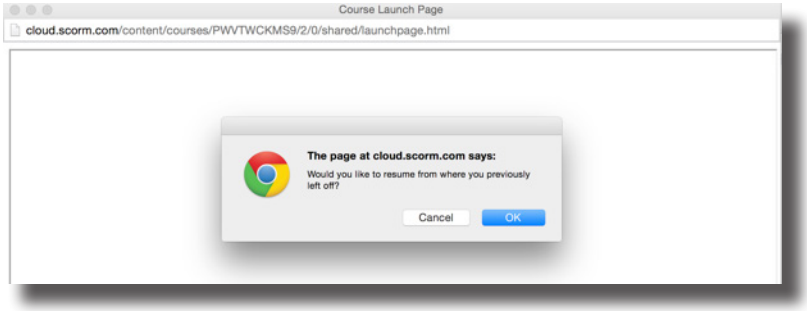
Leave Path open while completing SCORM content - automatically return to Path when done

SCORM content can include a link to 'exit' or 'return to LMS'. When the user closes the window or clicks a link this one of those, they'll be automatically returned to Path. Extra tabs/windows launched by SCORM will be closed at this time, and progress will be synchronizd between Path and SCORM Cloud.



Leaving and Coming Back

Progress can be tracked within your SCORM package, so learners will be prompted to pick up where they left off.



Reporting

Most course engagement reporting can be gathered from SCORM Cloud. You can also check out Admin > Reports > SCORM in Path. This tab contains a list of all SCORM content and general user engagement metrics, such as date first viewed, date completed, and item visits.
