DATA SHEET: PATH LMS PREMIERE

Blue Sky eLearn's Path™ Premium LMS, is a cloud-based learning management system that offers a new way of publishing, managing, and delivering learning content for external and internal audiences, helping to reduce barriers to implementing online learning programs with an easy-to-use, mobile-ready solution. Path is optimized for media content from educational events. Path LMS Premiere features include:

Live Events Package

Events Module

- A specific flow for clients who want to archive whole events (conferences, meetings, etc.).
- Event archive page listing all events/conferences with customizable cover images
- Ability to add presentations and attach links/documents to each presentation as resources (see Presentations section under LMS to see all different types of file upload options!)
- Each page shows a listing of presentations with two additional filters (generally for track and day)
- Events can include descriptions and keywords
- Administrative features to make the event "featured" on your site and "active"
- Includes eCommerce engine (lots of capabilities including selling an entire event or individual presentations)
- Drag and drop capabilities to define presentation order
- The primary intention is to enable better organization of sessions that have sub-sessions.
    - Sections have tracks and a presented on date. Presentations inside of a section have neither.
    - The event's track and date filter will return both sections & presentations
    - You can drag and drop presentations into sections
    - You can sell sections, apply groups to them, and do all of the other things you'd expect
    - Event Sections are unlocked within on-demand events

Live Web Registration and Reporting Adobe Connect, GoTo Meeting and GoTo Webinar Live Streams with Embed URL:

- Schedule and customize pre and post webinar messages
- Custom descriptions and end of meeting messages
- Set and reorder presenters with their pictures and bios
- Ability to set max registrations and close RSVP anytime
- Redirect users directly after the webinar ends
- Feature specific webinars on the homepage
- Attach resources for additional downloads such as handouts
- Easily select time and date
    - Time zone defaulted to user preference and displayed in all US time zones
- Add to calendar including Google Calendar, iCal, or Outlook.
- System requirements page and system checker
- Automatic Join Now button to launch webinars up to 30 minutes prior to start time
- Automatic detection of Seats Available, Limited Seats, and Full webinars

- Users can cancel RSVP to a webinar
- Automatic pop-up displays to users when the webinar is within 30 minutes from start time
- Automatic display of End Web Event Message
    - Ability for admins to upload a video archive once the webinar is complete
- Group attendance codes for webinars
- Host live streams and track attendance, sell registrations, and wrap with learning rules. This feature adds support for Live Events streamed from Livestream, Ustream, Mediasite, or any other streaming platform that provides you a web embed code snippet. It allows registration, ecommerce, membership availability settings, structured learning, or any of the other Path tools to be wrapped around a Live Stream.
- Includes eCommerce Engine

COMING 1st QTR 2018: Live In-Person Event Registration (to work similar to above)

LMS Standard and Advanced Learning Package

Courses Module

- Create a course library with description and metadata of contents
- Courses can contain Sections, Links, Documents, Presentations, Assessments, Surveys, Webinars and Certificates
- Customize course cover images
- Categorize courses by creating additional category filters
- Drag and drop capabilities to define course item order

Presentations (add presentations in both Events and Course Modules)

- Add presentations with
    - Overview
    - Resources
    - Contributors with photo and bio
    - Descriptions: Styles in WYSIWYG editor for description areas to show proper font styling – this allows easy customization of description areas: text, links, images, etc. You can embed any application with embed code in to the description areas of our pages. For example Quizlet, twitter feeds, Facebook like boxes, etc.
- Notetaking Capability
    - Your users can take advantage of Path's interactive notetaking tool to quickly jot anything down while watching or listening to a presentation. Each note creates a bookmark, allowing them to jump back to that spot with a single click. These notes are private to each of your users, and they can download each presentation's notes for offline viewing.
- Video playback adjustments- each video presentation has Speed adjustment (.5x, 1x, 1.5x, 2x) and Quality adjustment (low-res all the way up to 4k if available)
- Presentation Upload Files- Files are automatically converted to multiple files to ensure it will work on multiple devices.
    - Video Only Presentation: Standard video formats supported include:
        - MP4, MOV, MPG, AVI, FLV, F4V, ASF, WMV, VOB, MOD 3GP, MKV, DIVX, XVID
    - Slides:

        - PDF's from PowerPoints are automatically converted to our custom player with thumbnail view in progress bar of slides.
    - Audio Only:
        - MP3, wav and m4a file format
    - Slides synced with audio requires:
        - Slide image
        - Xml syncing file
        - Audio file
    - Slides synced with video requires:
        - Slide images
        - Xml syncing file
        - Video file
    - 3rd Party Files- The External presentation type is perfect for adding HTML5 content from third party authoring tools, such as Articulate or Captivate. Drag in your exported project, drop, and select an index file from the list. External presentations behave like Documents or Links, allowing the course taker to advance to the next item once it's been launched.

Assessments, Credits, Certificates, Surveys

Path has the ability to incorporate assessments and custom certificates and surveys within each course. Administrators can set the order and any prerequisites. Credit types and value can be assigned to the content.

Assessments:

- Assessments can be built-in as pre-requisites, pre and/or post-tests and include single multiple-choice, multiple multiple-choice questions (ex: choice a & c, all of the above, etc.) and matching question type.
- Assessments are graded automatically and can have multiple pages
- Administrators can assign passing scores, number of allowed retakes, keywords and notifications
- Assessments are flexible and easy to construct/organize
- Assessments can be on one scrollable page or multiple pages
- Option of unlimited assessment retakes after passing
- Site displays user progress while taking the tests
- Assessments can be timed
- Questions in assessments can be randomized
- Assessment question pools allow you to add random questions to an existing assessment, and build entire assessments from a pool of predefined questions. You can randomly generate questions for assessments quickly, and add variety to existing assessments.
- Once enabled (option for administrator to enable), test takers will see their correct and/or incorrect answers on the screen right after they submit. Additionally, administrators have WYSIWYG control over per-question rationales. When creating or editing a question for an assessment with summaries enabled, you'll see the rationale areas added to the question builder.

Certificates:

- As an administrator, easily generate certificates based on completion of specific items
- Certificate builder - Create fully customizable certificates with variable fields. Even custom registration fields can be added to certificate templates
- Administrators can drag and drop fields and upload images to construct re-useable certificate templates
- Certificate activity tab in the user's profile shows "in progress" and "completed" certificates and a certificate page showing user progress and automatic awarding of printable certificates
- Emails sent to users awarded certificates
- Certificate icons for prerequisites, checkmarks for completed course items, and a quick glance progress bar
- Assign multiple credit types to course items. Credits are also displayed as appropriate metadata of their items.
- Pull custom user fields onto certificates
- It's possible to configure a Path course for awarding different certificates per profession (or any other designation.)

Surveys:

Create fully customizable surveys

- Question types include:
    - Includes Open Ended Questions
    - Includes Multiple Choice Questions
    - Includes Matrix/Likert questions on surveys. **A**llows you to do survey response analysis in various ways. It also opens up the possibility for us to build roll-up reporting on weighted questions. Matrix/Likert questions will allow you to create questions where participants can rate or value some aspect of the course using a scale. This type of feedback can be invaluable for getting a pulse of the course, and provide insight for future reference.
- Create templates to use again
- The display format allows you to decide whether you want your participant to choose only one answer from the list of options, or whether more than one answer can be selected. The display format also allows you to choose whether to allow the answer to be selected as a radio button (single answer), a checkbox (multiple answers), or a drop-down (single answer).

SCORM

Path integrates directly with SCORM Cloud to support SCORM, AICC, and Tin Can.

- Path treats SCORM packages as course items, meaning you can leverage Path's powerful course structuring tools listed above.
- For learners with access to the content, launching is easy. SCORM content can include a link to 'exit' or 'return to LMS'. When the user closes the window or clicks a link like one of those, they'll be returned automatically to Path. Extra tabs/windows launched by SCORM will be closed at this time, and progress will be synchronized between Path and SCORM Cloud.
- Progress can be tracked within your SCORM package, so learners will be prompted to pick up where they left off.
- Client would actually be setup directly in the system so they could choose their own Scorm.com tier and get billed directly.
- Additional pricing TBD based on number of users when taking advantage of this integration.

Assignments for Instructor Led Courses

- This new course item adds a call and response between instructor and learner. Instructors can add details and handouts to the course, and learners submit by uploading their finished assignment. The item is only marked as 'completed' for the learner when the instructor 'passes' their submission.
- The Assignments feature allows you to create, grade and review coursework in Path. Participants can upload work for a grade, and receive feedback after submission.
- To complete and submit an assignment, participants can 'add their answer' by uploading their completed assignment and leaving any comments for the reviewer.
- After a participant has submitted the assignment for review, the instructor can log in and grade it.
- Assignments are automatically updated as the instructor grades them from the main assignments page.
- Any passed assignments are shown in green, along with any feedback written.
- Any failed assignments show up in red, and indicate the assignment needs to be resubmitted if allowed.
- After the assignment has been graded, participants can login and see the grade they received as well as any feedback.

Mobile/Tablet Optimized

Path has been built from the ground-up to support a variety of screen sizes, whether it is a mobile phone, tablet, laptop or desktop computer. Utilizing the latest design techniques, the system is fully responsive and adjusts the view depending on the device you are viewing from. This ensures that whether you are taking a test, viewing a video presentation or browsing content, it is displayed optimized for the device you are currently on. In addition, our back-end technology automatically converts any video content to ensure that it can be played back on virtually any device or operating system.

Bulk Upload and Bulk Import Capabilities

- Bulk media upload allows you to upload groups of media files to your presentations at once.
    - Bulk uploading media- This is where you upload all of the files you wish to associate to presentations.
    - Associating media to presentations- This is where you actually associate metadata to the various media files you've uploaded. This can be done using the Bulk Upload Template feature (for on-demand events only), or you can associate presentations to the media one at a time from the create/edit window.
- You can upload the .PDF files for Slides Only presentations in bulk. This is a big time-saver, especially with large events.
- Import assessments and assessment questions. Using the assessment importer**,** you can create multiple assessments in multiple courses with a single import file. When creating your assessment template, you'll need to set 2 different IDs:
    - Course ID: Shown in a table on the assessments import tool. Use this to reference which course each assessment should be added to.
    - Import ID: Defined by you. You'll use this later in the assessment questions importer.
    - Using the assessment questions importer, you can add all types of questions to multiple assessments from a single import file.
- Path LMS has two bulk import tools to help you quickly add large lists of assessments and assessment questions to your courses.
    - Both import tools use the concept of an Import ID to allow multiple assessments/questions to be imported from one template. This means you can organize all of your questions for every assessment into a single file upload.
- The bulk user importer -supports custom registration questions
- Basic Process:
    - You can use .csv (basic) or .xlsx (which is now fancy)

    - When you download an .xlsx template, it comes with built in data validations and help text (such as a list of available groups when you're on that row)
    - Max row limit is 5000
- Ecommerce transaction import tool
- Import external activity for users-This tool helps ease the pain of migrating user data from another LMS by creating a reference to each user's activity from the system.
    - You can import activity for multiple users in a single import file
    - There's a new tab for viewing each user's activity in Reports > External Activity
    - Users can view their own external activity in a table on their profile page (they will only have access to this new tab after you've imported external activity for them)
    - Each 'activity' has to have a type, description, and optional URL for linking back to original content

Course Progress Overrides

We've enabled a handful of different magic switches for administrative or support intervention with courses.

- *Regenerate certificates* for a single user on their user activity page, or for an entire course on the certificate report. Helpful if you updated the template or have name changes after certs are earned.
- *Reset an assessment* for a single user on their user activity page. Helpful for when someone hits the max retake limit but you want to allow them to continue.
- *Set user progress in bulk* from the external user activity import. Helpful for migrating people from another LMS without making them start coursework from the beginning.
- *Set user progress on individual items* for a single user on their user activity page. Helpful for customer support scenarios where you need an override switch to manually advance a user.

Revenue Generator Package

Ecommerce/Access Permissions

- Users can easily find their purchased items on your homepage, in their profile, and by using our intelligent filtering system
- Includes secure e-commerce capabilities utilizing many popular payment solutions, like Paypal, PayFlow Pro, Authorize.Net, Braintree, Stripe, Blue Pay.
- Supports third-party checkout mode, in which your AMS can facilitate the order/checkout process
- Sell content by Event or Course as well as by individual items.
- Create Product Bundles for grouping together anything from entire courses to individual presentations
- Built-in shopping cart allows users to browse the site and purchase multiple items at the same time.
- Robust Group Permissions capabilities enable granular control over which group of users see what content. Create unlimited groups and utilize an intuitive admin control to set what content each group should have access to.
- Coupons- You can offer discounts based on percentage of total cost, or a set amount.
- Create manual orders
- Allows for member/non-member configurations, as well as the ability to show/hide specific content to anonymous users.
- Group pricing – Admins can easily set different prices for Course, Events, or any item per group.
- Custom Registration Questions for users to fill out during sign up of their Path account.
- Access Codes as a custom registration question.
- Purchase credits allow you to add currency to user accounts in Path. You can either manually add purchase credits, or you can create a coupon code that can be redeemed for account credit.

- All content for sale can be set to expire. You can choose a certain date or a number of days after purchase. You can choose whether the content can be repurchased or not. Users who purchase expiring content will see expiration in a handful of ways:
    - 'Your content is expiring' email notifications within a 7-day window
    - New filter and text label on profile page
    - Banner on the actual product

Integrated Ad Network (Option)

We provide a better way to organize, manage, monetize and deliver engaging video content to your members and prospective members by embedding a custom branded video channel on your website with real-time responsive design for proper display and fast playback on any device:

- Delivering robust categorization and filtering capabilities
- Featuring relevant advertising alongside your video content that drives additional revenue for your association

Member Success Package

Services:

- Dedicated Client Success Manager
- Email, Chat and Phone support for Path admins
- Email, Phone and Chat support for Path end-users

Features:

- Access control Integration options with major AMS platforms
- Usage analytics (google)
- Insightful reporting
- Path Search

<u>Reporting</u>

Our reporting includes two unique modules.

The first module is a System Dashboard that provides a visual representation of the activity in your account, as well as a heads-up display that lists all the important information such as total content, number of users, number of certificates etc.

The second module contains our robust detailed reports that provide a comprehensive view of user activity, module activity, assessments and certificates issued, and many other reports. The reports give you the tools needed to quickly gauge a course or programs effectiveness or identify your most popular content. Designated personnel can be granted administrative access for a variety of reports including utilization stats, assessment results, registration profiles and multiple drill-down statistics available 24/7. Reports can be exported to Excel® for further sorting needs.

<u>Limited Access Administrators</u>

When editing a user, you'll see two administrative options:

- Grant full admin access
- Grant limited admin access (displays when full admin is turned off)

Use the limited admin access to grant users permission to portions of the administrative back-end, such as reporting or bulk uploads.

Search

- A unified search bar allows your users to search the system from any page on the site.
- Keywords can be assigned to virtually all assets in the system, including events, courses, documents, and assessments to ensure the most relevant results are returned to users searching on key terms.
- Search by titles and descriptions as well as speaker/author name or bio
- Filter all search results by content type

Internationalization

- Automatic switching of system text (buttons, labels, pre-defined system text, etc.)
- Administrator can default their portal to a specific language for system text
- Users can edit settings in their profile to change the default language for system text

Group Management

- Groups are created in Path to manage privileges to courses, events, and content. Members of a group have access to all the content, events, and courses as defined by the administrator. As an administrator you can assign, edit, or revoke permissions for a group or an individual.
- Group pricing allows you to sell content to select participants in Path based on the groups they belong to. Group pricing can be applied to: On-demand events, courses, live web events, presentations, and all items within a course.

Security

- Utilizes PCI Level 1 Compliant payment gateway
- SSL Security on all for ecommerce pages.
- Path is hosted on the state-of-the-art Heroku Cloud Platform which is SSAE 16/ISAE 3402 and ISO 27001 compliant.

Embedding Path in an external website (Upgrade to Enterprise- additional $100/mo)

- The Header and Footer of Path will automatically be hidden (useful if you're also using Path standalone)
- You can send users directly to a page within the Iframe without creating an extra page on your site
- Native browser functions work (such as the back button and refresh button)
- Share buttons (on Video Go videos) will link back to the parent website as opposed to standalone Path

Social

- A comment feed allows participants to actively discuss content in Path. Comments are powered by Disqus, an external platform that enables you to embed a comment feed in Path. The comment feed appears on the selected content homepage. You can add a comment feed to almost any course or event item.
