Catch up and check-in

Heidi Veillette <Heidi@veillettecommunications.com> Mon, Sep 16, 2024 at 10:22 AM
To: Jessica Marshall <jessica.marshall@catalystmeded.com>

Hi Jessica,

Yes those rates look great.

I may not be able to estimate the word count until closer to the end of the project, if that's ok? I'm basing most of the project on the ARRT mammography content outline for accreditation and adding MRI as needed.

Talk to you soon,

Heidi Veillette BSc, RT(R)(MR)

Hi Heidi

Would the following work?

2.5 credits (12,300 words) $6,650
2.75 credits (13,550 words) $7,250
3.0 credits (14,750 words) $8,100

Working in MRI would probably make the course longer than 2.0 CE. Looking at page 6 of the ARRT mammography content outline for accreditation, there are a lot of pathologies listed. However, I won't know the exact amount of information until I get into the research.

Our current rate for a 2.0CE course is $5800, but we haven't discussed the rate for 3.0CE. What are your thoughts on that?

Thanks,

Breast pathology imaging works well the MRI incorporated. If we could early/Mid Nov that works! Are you thinking more than 2.0 credits with the combined modalities?

Hi Jessica,

It's great to hear you're interested in growing the library. I would love to write another 2.0 CE course, and mammographic pathologies is a great topic. I can either do it alone or merge it with MRI to make a comprehensive "Breast pathology imaging" course to get more readership.

The hottest topic in radiology is artificial intelligence, but since that field advances so quickly, I think it would be best to wait to write that course until right before the library goes live. Some other timely topics to keep in mind are radiation safety and cardiac imaging.

I can't remember the exact timelines of the other projects, but I think they were usually 7-8 weeks out? Mid-November works for me, but I'm flexible with what you prefer.
I'm looking forward to working with you again,

Hi Heidi,

We are working on some logistics for the RT project and hope to have the process more "automated" soon. At this point, I think we can continue to grow the library. Based on your availability, if there is a 2.0 credit article you'd like to work on - not sure if there is a timely topic or you'd like to select one from the original list - perhaps mammography - pathologies?

Let me know your thoughts.

The last time we talked, you mentioned that the course editing was backlogged and you did not require my writing services at the time. If that has changed, I am very interested in continuing to build the RT course library. I have upcoming availability, and I wanted to let you know that I also write needs assessments in all therapeutic areas except oncology.
